

Slide Glass

✓ glazing: 10 mm tempered single glass

✓ system designed for Porch and Patio Frameless Enclosures

The Slide Glass aluminium sliding system is designed for modern interior space dividers (office, classes etc.) and patio where users expect ergonomics, good lighting and an effective arrangement. It also works well as a way of building pergolas and enclosures, offering effective protection against the wind.

The visibility of the profiles has been minimised in the system and the size of the glazing has been clearly improved compared to traditional solutions. Slide Glass uses 10 mm safety tempered glass. It is also possible to close its sashes using built-in side hooks or special locks.

Thanks to Slide Glass, you can create naturally ventilated space with panoramic view to enjoy all seasons avoiding the weather impact.
